

cut 1/2" down so ----->
you can fold the top flaps
over and glue them down
(strengthens the rim of
the tower)

cut 1/2" down so ----->
you can fold the top flaps
over and glue them down
(strengthens the rim of
the tower)

cut 1/2" down
here too ----->

Once you've folded the flap over, bend this
ledge up to form the "roof" of the tower
Bend the glue flaps down to glue them
to the two closest sides of the tower.

TOWER

You may want to glue the Top Inside Ramp piece
to the inside of the tower before you've glued the
tower completely shut, so you have more room to
get it into the right position.

The Bottom Inside Ramp can be glued into place
relatively easily after the tower has been glued
shut.

It's up to you whether you want to glue the tower
to the tray permanently, or if you want to keep them
separate for easier storage.
